

10-Year Energy Consumption History by Class

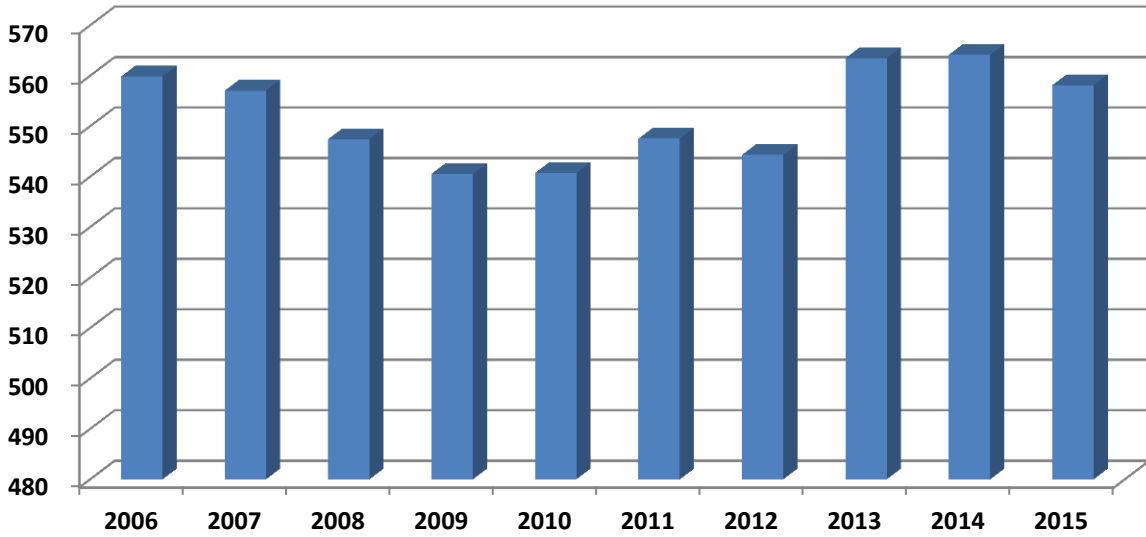

The graphs below represent a 10-year history of electricity consumption by Residential and Commercial/Industrial members of New Hampshire Electric Cooperative for the years 2006-2015.

The average monthly kWh consumption for residential members went down 1% from 2014 even though we had a growth in new members. Residential members make up 87% of our membership and they consume 61% of all kWh sales.

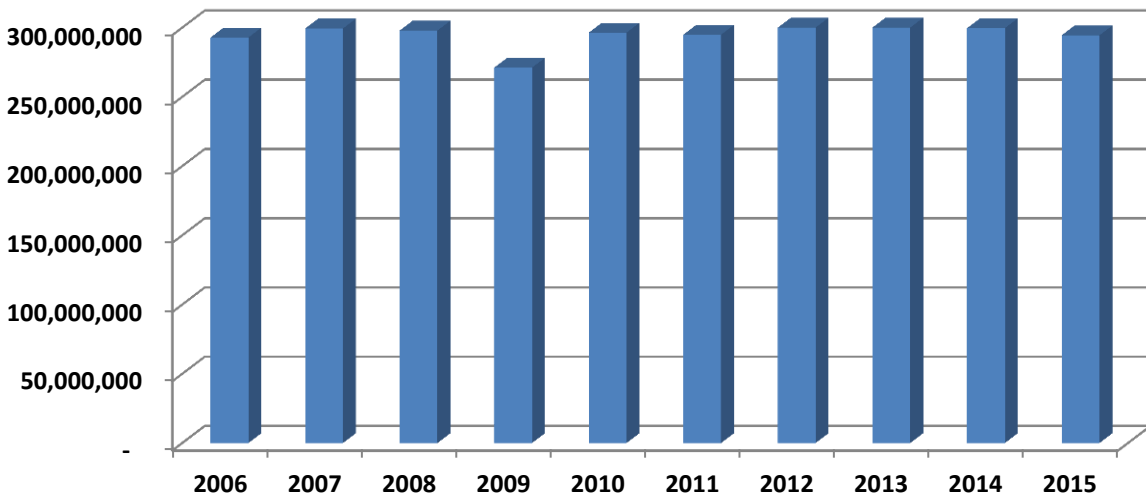

Commercial/Industrial kWh sales declined slightly in 2015. With Commercial sales remaining relatively flat and Industrial sales down 5%, the largest decline in kWh sales for 2015 was in the Ski Area sales of 13%.
